

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (original): A sliding member comprising a slidable substrate and a pressure-sensitive adhesive layer provided on one side thereof, wherein the slidable substrate is a porous form comprising a plastic, and a barrier layer is provided between the slidable substrate and the pressure-sensitive adhesive layer.
2. (original): The sliding member as claimed in claim 1, wherein the slidable substrate has a coefficient of friction of 0.2 or lower.
3. (original): The sliding member as claimed in claim 1, wherein the slidable substrate is a porous form comprising an ultrahigh molecular weight polyethylene.
4. (original): The sliding member as claimed in claim 3, wherein the ultrahigh molecular weight polyethylene has a molecular weight of 500,000 or higher.
5. (original): The sliding member as claimed in claim 3, wherein the porous form has a porosity of 20-70%.

6. (original): The sliding member as claimed in claim 1, wherein the barrier layer comprises a thermoplastic resin.

7. (currently amended): The sliding member as claimed in ~~claim 1~~ claim 6, wherein the thermoplastic resin has a melt viscosity of 5-500 kPa.s.

8. (original): The sliding member as claimed in claim 7, wherein the thermoplastic resin is a crosslinked polyethylene.

9. (original): The sliding member as claimed in claim 1, wherein the barrier layer has a thickness of 0.01-0.5 mm.
